

# Scan Report

November 28, 2025

## Summary

This document reports on the results of an automatic security scan. All dates are displayed using the timezone “Coordinated Universal Time”, which is abbreviated “UTC”. The task was “metasploitable3VM”. The scan started at Fri Nov 28 19:53:15 2025 UTC and ended at Fri Nov 28 20:46:28 2025 UTC. The report first summarises the results found. Then, for each host, the report describes every issue found. Please consider the advice given in each description, in order to rectify the issue.

## Contents

<b>1</b>	<b>Result Overview</b>	<b>2</b>
1.1	Host Authentifications . . . . .	2
<b>2</b>	<b>Results per Host</b>	<b>2</b>
2.1	192.168.0.17 . . . . .	2
2.1.1	High general/tcp . . . . .	3
2.1.2	High 22/tcp . . . . .	4
2.1.3	High 631/tcp . . . . .	5
2.1.4	High 21/tcp . . . . .	9
2.1.5	High 80/tcp . . . . .	11
2.1.6	High 6697/tcp . . . . .	14
2.1.7	Medium 22/tcp . . . . .	16
2.1.8	Medium 631/tcp . . . . .	20
2.1.9	Medium 21/tcp . . . . .	24
2.1.10	Medium 80/tcp . . . . .	25
2.1.11	Low general/tcp . . . . .	33
2.1.12	Low general/icmp . . . . .	34
2.1.13	Low 22/tcp . . . . .	35

## 1 Result Overview

Host	High	Medium	Low	Log	False Positive
192.168.0.17	10	13	3	0	0
Total: 1	10	13	3	0	0

Vendor security updates are not trusted.

Overrides are off. Even when a result has an override, this report uses the actual threat of the result.

Information on overrides is included in the report.

Notes are included in the report.

This report might not show details of all issues that were found.

Issues with the threat level “Log” are not shown.

Issues with the threat level “Debug” are not shown.

Issues with the threat level “False Positive” are not shown.

Only results with a minimum QoD of 70 are shown.

This report contains all 26 results selected by the filtering described above. Before filtering there were 445 results.

### 1.1 Host Authentications

Host	Protocol	Result	Port/User
192.168.0.17	SMB	Success	Protocol SMB, Port 445, User

## 2 Results per Host

### 2.1 192.168.0.17

Host scan start Fri Nov 28 19:53:56 2025 UTC

Host scan end Fri Nov 28 20:46:23 2025 UTC

Service (Port)	Threat Level
general/tcp	High
22/tcp	High
631/tcp	High
21/tcp	High
80/tcp	High
6697/tcp	High
22/tcp	Medium
631/tcp	Medium
21/tcp	Medium

... (continues) ...

... (continued) ...

Service (Port)	Threat Level
80/tcp	Medium
general/tcp	Low
general/icmp	Low
22/tcp	Low

### 2.1.1 High general/tcp

<p>High (CVSS: 10.0)  NVT: Operating System (OS) End of Life (EOL) Detection</p> <p><b>Product detection result</b>  cpe:/o:canonical:ubuntu_linux:14.04  Detected by OS Detection Consolidation and Reporting (OID: 1.3.6.1.4.1.25623.1.0  ↔.105937)</p>
<p><b>Summary</b>  The Operating System (OS) on the remote host has reached the end of life (EOL) and should not be used anymore.</p>
<p><b>Quality of Detection (QoD):</b> 80%</p>
<p><b>Vulnerability Detection Result</b>  The "Ubuntu" Operating System on the remote host has reached the end of life.  CPE: cpe:/o:canonical:ubuntu_linux:14.04  Installed version,  build or SP: 14.04  EOL date: 2024-04-01  EOL info: <a href="https://wiki.ubuntu.com/Releases">https://wiki.ubuntu.com/Releases</a></p>
<p><b>Impact</b>  An EOL version of an OS is not receiving any security updates from the vendor. Unfixed security vulnerabilities might be leveraged by an attacker to compromise the security of this host.</p>
<p><b>Solution:</b>  <b>Solution type:</b> Mitigation  Update the OS on the remote host to a version which is still supported and receiving security updates by the vendor.  Note / Important: Please create an override for this result if the target host is a:  - Windows system with Extended Security Updates (ESU)  - System with additional 3rd-party / non-vendor security updates like e.g. from 'TuxCare', 'Freexian Extended LTS' or similar</p>
<p><b>Vulnerability Detection Method</b>  ... continues on next page ...</p>

### 2.1.2 High 22/tcp

High (CVSS: 9.8) NVT: SSH Brute Force Logins With Default Credentials Reporting
<b>Summary</b> It was possible to login into the remote SSH server using default credentials.
<b>Quality of Detection (QoD):</b> 95%
<b>Vulnerability Detection Result</b> It was possible to login with the following credentials <User>:<Password> vagrant:vagrant
<b>Impact</b> This issue may be exploited by a remote attacker to e.g. gain access to sensitive information or modify system configuration.
<b>Solution:</b> <b>Solution type:</b> Mitigation Change the password as soon as possible.
<b>Affected Software/OS</b> The following products are known to use the default credentials checked by the VT 'SSH Brute Force Logins With Default Credentials' (OID: 1.3.6.1.4.1.25623.1.0.108013) used for this reporting: <ul style="list-style-type: none"> <li>- CVE-2017-16523: MitraStar GPT-2541GNAC (HGU) 1.00(VNJ0)b1 and DSL-100HN-T1 ES_113WJY0b16 devices</li> <li>- CVE-2020-29583: Zyxel Firewall / AP Controller</li> <li>- CVE-2020-9473: S. Siedle &amp; Soehne SG 150-0 Smart Gateway before 1.2.4</li> <li>- CVE-2021-27797: Brocade Fabric OS</li> <li>- CVE-2023-1944: minikube 1.29.0 and probably prior</li> <li>- CVE-2024-22902: Vinchin Backup &amp; Recovery</li> </ul>

... continues on next page ...

<p>... continued from previous page ...</p> <ul style="list-style-type: none"><li>- CVE-2024-31970: AdTran SRG 834-5 HDC17600021F1 devices (with SmartOS 11.1.1.1) during a window of time when the device is being set up</li><li>- CVE-2024-46328: VONETS VAP11G-300 v3.3.23.6.9</li><li>- Various additional products like e.g. Ubiquiti EdgeMax / EdgeRouter, Crestron AM-100 and similar for which no CVE was assigned (See 'default_credentials.inc' file on the file system for a full list)</li></ul> <p>Other products might be affected as well.</p>
<p><b>Vulnerability Insight</b></p> <p>As the VT 'SSH Brute Force Logins With Default Credentials' (OID: 1.3.6.1.4.1.25623.1.0.108013) might run into a timeout the actual reporting of this vulnerability takes place in this VT instead.</p>
<p><b>Vulnerability Detection Method</b></p> <p>Reports default credentials detected by the VT 'SSH Brute Force Logins With Default Credentials' (OID: 1.3.6.1.4.1.25623.1.0.108013).</p> <p>Details: SSH Brute Force Logins With Default Credentials Reporting OID:1.3.6.1.4.1.25623.1.0.103239</p> <p>Version used: 2025-04-04T05:39:39Z</p>

### 2.1.3 High 631/tcp

High (CVSS: 7.5) NVT: SSL/TLS: Report Vulnerable Cipher Suites for HTTPS
<b>Product detection result</b> cpe:/a:ietf:transport_layer_security Detected by SSL/TLS: Report Supported Cipher Suites (OID: 1.3.6.1.4.1.25623.1.0. ↵802067)
<b>Summary</b> This routine reports all SSL/TLS cipher suites accepted by a service where attack vectors exists only on HTTPS services.
<b>Quality of Detection (QoD):</b> 98%
<b>Vulnerability Detection Result</b> 'Vulnerable' cipher suites accepted by this service via the TLSv1.0 protocol: TLS_RSA_WITH_3DES_EDE_CBC_SHA (SWEET32) 'Vulnerable' cipher suites accepted by this service via the TLSv1.1 protocol: TLS_RSA_WITH_3DES_EDE_CBC_SHA (SWEET32) 'Vulnerable' cipher suites accepted by this service via the TLSv1.2 protocol: TLS_RSA_WITH_3DES_EDE_CBC_SHA (SWEET32)
<b>Impact</b> This could allow remote attackers to obtain sensitive information or have other, unspecified impacts.
<b>Solution:</b> <b>Solution type:</b> Mitigation The configuration of this services should be changed so that it does not accept the listed cipher suites anymore. Please see the references for more resources supporting you with this task.
<b>Affected Software/OS</b> All services accepting vulnerable SSL/TLS cipher suites via HTTPS.
<b>Vulnerability Insight</b> These rules are applied for the evaluation of the vulnerable cipher suites: - 64-bit block cipher 3DES vulnerable to the SWEET32 attack (CVE-2016-2183).
<b>Vulnerability Detection Method</b> Checks previous collected cipher suites. Details: SSL/TLS: Report Vulnerable Cipher Suites for HTTPS OID:1.3.6.1.4.1.25623.1.0.108031 Version used: 2025-03-27T05:38:50Z

### Vulnerability Insight

The following devices / software is known to be affected:

- CVE-2001-1594: Codonics printer FTP service as used in GE Healthcare eNTEGRA P&R
- CVE-2013-7404: GE Healthcare Discovery NM 750b
- CVE-2014-9198: Schneider Electric ETG3000 FactoryCast HMI gateways
- CVE-2015-7261: QNAP iArtist Lite distributed with QNAP Signage Station
- CVE-2016-8731: Foscam C1 devices
- CVE-2017-8218: vsftpd on TP-Link C2 and C20i devices
- CVE-2018-9068: IMM2 for IBM and Lenovo System x
- CVE-2018-17771: Ingenico Telium 2 PoS terminals
- CVE-2018-19063, CVE-2018-19064: Foscam C2 and Opticam i5 devices

Note: As the VT 'FTP Brute Force Logins With Default Credentials' (OID: 1.3.6.1.4.1.25623.1.0.108717) might run into a timeout the actual reporting of this vulnerability takes place in this VT instead.

### Vulnerability Detection Method

Reports weak/known credentials detected by the VT 'FTP Brute Force Logins With Default Credentials' (OID: 1.3.6.1.4.1.25623.1.0.108717).

Details: **FTP Brute Force Logins With Default Credentials Reporting**  
OID:1.3.6.1.4.1.25623.1.0.108718

Version used: 2025-05-13T05:41:39Z

#### 2.1.5 High 80/tcp

High (CVSS: 10.0) NVT: Drupal Coder RCE Vulnerability (SA-CONTRIB-2016-039) - Active Check
<b>Summary</b> Drupal is prone to a remote code execution (RCE) vulnerability.
<b>Quality of Detection (QoD):</b> 95%
<b>Vulnerability Detection Result</b> Vulnerable URL: <a href="http://192.168.0.17/drupal/sites/all/modules/coder(coder_upgrade ↴/scripts/coder_upgrade.run.php">http://192.168.0.17/drupal/sites/all/modules/coder(coder_upgrade ↴/scripts/coder_upgrade.run.php</a>
<b>Solution:</b> <b>Solution type:</b> VendorFix Install the latest version.
<b>Vulnerability Insight</b> The Coder module checks your Drupal code against coding standards and other best practices. It can also fix coding standard violations and perform basic upgrades on modules. The module doesn't sufficiently validate user inputs in a script file that has the php extension. A malicious unauthenticated user can make requests directly to this file to execute arbitrary php code.
<b>Vulnerability Detection Method</b> Checks for known error message from affected modules. Details: Drupal Coder RCE Vulnerability (SA-CONTRIB-2016-039) - Active Check OID:1.3.6.1.4.1.25623.1.0.105818 Version used: 2023-07-21T05:05:22Z
<b>References</b> url: <a href="https://www.drupal.org/node/2765575">https://www.drupal.org/node/2765575</a>

High (CVSS: 7.5) NVT: Test HTTP dangerous methods
<b>Summary</b> Misconfigured web servers allows remote clients to perform dangerous HTTP methods such as PUT and DELETE.
<b>Quality of Detection (QoD):</b> 99%
<b>Vulnerability Detection Result</b> We could upload the following files via the PUT method at this web server: <a href="http://192.168.0.17/uploads/puttest958883110.html">http://192.168.0.17/uploads/puttest958883110.html</a> We could delete the following files via the DELETE method at this web server: <a href="http://192.168.0.17/uploads/puttest958883110.html">http://192.168.0.17/uploads/puttest958883110.html</a>
... continues on next page ...

<p style="text-align: right;">... continued from previous page ...</p>
<p><b>Impact</b></p> <ul style="list-style-type: none"> <li>- Enabled PUT method: This might allow an attacker to upload and run arbitrary code on this web server.</li> <li>- Enabled DELETE method: This might allow an attacker to delete additional files on this web server.</li> </ul>
<p><b>Solution:</b></p> <p><b>Solution type:</b> Mitigation Use access restrictions to these dangerous HTTP methods or disable them completely.</p>
<p><b>Affected Software/OS</b> Web servers with enabled PUT and/or DELETE methods.</p>
<p><b>Vulnerability Detection Method</b> Checks if dangerous HTTP methods such as PUT and DELETE are enabled and can be misused to upload or delete files. Details: <b>Test HTTP dangerous methods</b> OID:1.3.6.1.4.1.25623.1.0.10498 Version used: 2023-08-01T13:29:10Z</p>

### 2.1.6 High 6697/tcp

	High (CVSS: 8.1) NVT: UnrealIRCd Authentication Spoofing Vulnerability
<b>Product detection result</b>	cpe:/a:unrealircd:unrealircd:3.2.8.1 Detected by UnrealIRCd Detection (OID: 1.3.6.1.4.1.25623.1.0.809884)
<b>Summary</b>	UnrealIRCd is prone to authentication spoofing vulnerability.
<b>Quality of Detection (QoD):</b>	80%
<b>Vulnerability Detection Result</b>	<p>Installed version: 3.2.8.1  Fixed version: 3.2.10.7</p>
<b>Impact</b>	... continues on next page ...

<p style="text-align: right;">... continued from previous page ...</p>
Successful exploitation of this vulnerability will allow remote attackers to spoof certificate fingerprints and consequently log in as another user.
<b>Solution:</b> <b>Solution type:</b> VendorFix Upgrade to UnrealIRCd 3.2.10.7, or 4.0.6, or later.
<b>Affected Software/OS</b> UnrealIRCd before 3.2.10.7 and 4.x before 4.0.6.
<b>Vulnerability Insight</b> The flaw exists due to an error in the 'm_authenticate' function in 'modules/m_sasl.c' script.
<b>Vulnerability Detection Method</b> Checks if a vulnerable version is present on the target host. Details: UnrealIRCd Authentication Spoofing Vulnerability OID: 1.3.6.1.4.1.25623.1.0.809883 Version used: 2023-07-14T16:09:27Z
<b>Product Detection Result</b> Product: cpe:/a:unrealircd:unrealircd:3.2.8.1 Method: UnrealIRCd Detection OID: 1.3.6.1.4.1.25623.1.0.809884)

Medium (CVSS: 5.3)  
NVT: Weak Key Exchange (KEX) Algorithm(s) Supported (SSH)

**Product detection result**  
cpe:/a:ietf:secure\_shell\_protocol

... continues on next page ...

<p>... continued from previous page ...</p> <p><b>Detected by SSH Protocol Algorithms Supported (OID: 1.3.6.1.4.1.25623.1.0.105565</b> →)</p>								
<p><b>Summary</b> The remote SSH server is configured to allow / support weak key exchange (KEX) algorithm(s).</p>								
<p><b>Quality of Detection (QoD):</b> 80%</p>								
<p><b>Vulnerability Detection Result</b> The remote SSH server supports the following weak KEX algorithm(s):</p> <table style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th style="text-align: left;">KEX algorithm</th> <th style="text-align: center;">  Reason</th> </tr> </thead> <tbody> <tr> <td colspan="2" style="border-top: 1px dashed black; border-bottom: 1px dashed black;">→-----</td> </tr> <tr> <td>diffie-hellman-group-exchange-sha1</td> <td style="text-align: center;">  Using SHA-1</td> </tr> <tr> <td>diffie-hellman-group1-sha1</td> <td style="text-align: center;">  Using Oakley Group 2 (a 1024-bit MODP group →) and SHA-1</td> </tr> </tbody> </table>	KEX algorithm	Reason	→-----		diffie-hellman-group-exchange-sha1	Using SHA-1	diffie-hellman-group1-sha1	Using Oakley Group 2 (a 1024-bit MODP group →) and SHA-1
KEX algorithm	Reason							
→-----								
diffie-hellman-group-exchange-sha1	Using SHA-1							
diffie-hellman-group1-sha1	Using Oakley Group 2 (a 1024-bit MODP group →) and SHA-1							
<p><b>Impact</b> An attacker can quickly break individual connections.</p>								
<p><b>Solution:</b> <b>Solution type:</b> Mitigation Disable the reported weak KEX algorithm(s) - 1024-bit MODP group / prime KEX algorithms: Alternatively use elliptic-curve Diffie-Hellmann in general, e.g. Curve 25519.</p>								
<p><b>Vulnerability Insight</b> - 1024-bit MODP group / prime KEX algorithms: Millions of HTTPS, SSH, and VPN servers all use the same prime numbers for Diffie-Hellman key exchange. Practitioners believed this was safe as long as new key exchange messages were generated for every connection. However, the first step in the number field sieve—the most efficient algorithm for breaking a Diffie-Hellman connection—is dependent only on this prime. A nation-state can break a 1024-bit prime.</p>								
<p><b>Vulnerability Detection Method</b> Checks the supported KEX algorithms of the remote SSH server. Currently weak KEX algorithms are defined as the following: - non-elliptic-curve Diffie-Hellmann (DH) KEX algorithms with 1024-bit MODP group / prime - ephemeral generated key exchange groups uses SHA-1 - using RSA 1024-bit modulus key Details: Weak Key Exchange (KEX) Algorithm(s) Supported (SSH) OID:1.3.6.1.4.1.25623.1.0.150713 Version used: 2024-06-14T05:05:48Z</p>								
<p><b>Product Detection Result</b> ... continues on next page ...</p>

### 2.1.8 Medium 631/tcp

Medium (CVSS: 4.3) NVT: SSL/TLS: Deprecated TLSv1.0 and TLSv1.1 Protocol Detection
<b>Product detection result</b> cpe:/a:ietf:transport_layer_security:1.0 Detected by SSL/TLS: Version Detection (OID: 1.3.6.1.4.1.25623.1.0.105782)
<b>Summary</b> It was possible to detect the usage of the deprecated TLSv1.0 and/or TLSv1.1 protocol on this system.
<b>Quality of Detection (QoD):</b> 98%
<b>Vulnerability Detection Result</b> In addition to TLSv1.2+ the service is also providing the deprecated TLSv1.0 and TLSv1.1 protocols and supports one or more ciphers. Those supported ciphers can be found in the 'SSL/TLS: Report Supported Cipher Suites' (OID: 1.3.6.1.4.1.25623.1.0.802067) VT.
<b>Impact</b> An attacker might be able to use the known cryptographic flaws to eavesdrop the connection between clients and the service to get access to sensitive data transferred within the secured connection. Furthermore newly uncovered vulnerabilities in this protocols won't receive security updates anymore.
<b>Solution:</b> <b>Solution type:</b> Mitigation It is recommended to disable the deprecated TLSv1.0 and/or TLSv1.1 protocols in favor of the TLSv1.2+ protocols. Please see the references for more resources supporting you with this task.
<b>Affected Software/OS</b> <ul style="list-style-type: none"> <li>- All services providing an encrypted communication using the TLSv1.0 and/or TLSv1.1 protocols</li> <li>- CVE-2023-41928: Kiloview P1 4G and P2 4G Video Encoder</li> <li>- CVE-2024-41270: Gorush v1.18.4</li> <li>- CVE-2025-3200: Multiple products from Wiesemann &amp; Theis</li> </ul>
<b>Vulnerability Insight</b> The TLSv1.0 and TLSv1.1 protocols contain known cryptographic flaws like: <ul style="list-style-type: none"> <li>- CVE-2011-3389: Browser Exploit Against SSL/TLS (BEAST)</li> <li>- CVE-2015-0204: Factoring Attack on RSA-EXPORT Keys Padding Oracle On Downgraded Legacy Encryption (FREAK)</li> </ul>
<b>Vulnerability Detection Method</b> Checks the used TLS protocols of the services provided by this system.

### 2.1.9 Medium 21/tcp

Medium (CVSS: 4.8) NVT: FTP Unencrypted Cleartext Login
<b>Summary</b> The remote host is running a FTP service that allows cleartext logins over unencrypted connections.
<b>Quality of Detection (QoD):</b> 70%
<b>Vulnerability Detection Result</b> The remote FTP service accepts logins without a previous sent 'AUTH TLS' command →. Response(s): Non-anonymous sessions: 331 Password required for gbvt Anonymous sessions: 331 Anonymous login ok, send your complete email address → as your password
<b>Impact</b> An attacker can uncover login names and passwords by sniffing traffic to the FTP service.
<b>Solution:</b> <b>Solution type:</b> Mitigation Enable FTPS or enforce the connection via the 'AUTH TLS' command. Please see the manual of the FTP service for more information.
<b>Vulnerability Detection Method</b> Tries to login to a non FTPS enabled FTP service without sending a 'AUTH TLS' command first and checks if the service is accepting the login without enforcing the use of the 'AUTH TLS' command. Details: <b>FTP Unencrypted Cleartext Login</b> OID:1.3.6.1.4.1.25623.1.0.108528 Version used: 2023-12-20T05:05:58Z

Medium (CVSS: 5.0) NVT: Drupal 7.0 Information Disclosure Vulnerability - Active Check
<b>Summary</b> Drupal is prone to an information disclosure vulnerability.
<b>Quality of Detection (QoD):</b> 95%
<b>Vulnerability Detection Result</b> Vulnerable URL: <a href="http://192.168.0.17/drupal/modules/simpletest/tests/upgrade/drupal-6.upload.database.php">http://192.168.0.17/drupal/modules/simpletest/tests/upgrade/drupal-6.upload.database.php</a>
<b>Impact</b> Successful exploitation will allow attacker to obtain sensitive information that could aid in further attacks.
<b>Solution:</b> <b>Solution type:</b> WillNotFix No known solution was made available for at least one year since the disclosure of this vulnerability. Likely none will be provided anymore. General solution options are to upgrade to a newer release, disable respective features, remove the product or replace the product by another one.
<b>Affected Software/OS</b> Drupal version 7.0 is known to be affected.
<b>Vulnerability Insight</b> The flaw is due to insufficient error checking, allows remote attackers to obtain sensitive information via a direct request to a .php file, which reveals the installation path in an error message.
<b>Vulnerability Detection Method</b> Details: Drupal 7.0 Information Disclosure Vulnerability - Active Check OID:1.3.6.1.4.1.25623.1.0.902574 Version used: 2021-12-01T11:10:56Z

Medium (CVSS: 5.0) NVT: Sensitive File Disclosure (HTTP)
<p><b>Summary</b>  The script attempts to identify files containing sensitive data at the remote web server.</p>
<p><b>Quality of Detection (QoD): 70%</b></p> <p><b>Vulnerability Detection Result</b>  The following files containing sensitive information were identified:  Description: Microsoft IIS / ASP.NET Core Module web.config file accessible. This could contain sensitive information about the structure of the application / web server and shouldn't be accessible.  Match: &lt;configuration&gt;  &lt;system.webServer&gt;  Used regex: ^\s*&lt;(configuration system\.web(Server)??)&gt;  Extra match 1: &lt;/system.webServer&gt;  &lt;/configuration&gt;  Used regex: ^\s*&lt;!--(configuration system\.web(Server)??)&amp;gt;&lt;br/&gt; URL: <a href="http://192.168.0.17/drupal/web.config">http://192.168.0.17/drupal/web.config</a></p>
<p><b>Impact</b>  ... continues on next page ...</p>

<p>... continued from previous page ...</p> <p>Based on the information provided in these files an attacker might be able to gather additional info and/or sensitive data like usernames and passwords.</p> <p><b>Solution:</b> <b>Solution type:</b> Mitigation The sensitive files shouldn't be accessible via a web server. Restrict access to it or remove it completely.</p>
<p><b>Vulnerability Insight</b> Currently the script is checking for files like e.g.: - Software (Blog, CMS) configuration or log files - Web / application server configuration / password files (e.g. .htaccess, .htpasswd, web.config, web.xml, ...) - Cloud (e.g. AWS) configuration files - Files containing API keys for services / providers - Database backup files (e.g. .sql, ...) - Editor / history files (e.g. .lessht, .dbshell, ...) - SSH or SSL/TLS Private Keys - Generic environment files (e.g. .env including the ones from Codeigniter, ...) - CVE-2017-16894: Laravel framework specific environment/.env files</p>
<p><b>Vulnerability Detection Method</b> Enumerate the remote web server and check if sensitive files are accessible. Details: Sensitive File Disclosure (HTTP) OID:1.3.6.1.4.1.25623.1.0.107305 Version used: 2025-10-29T05:40:29Z</p>
<p><b>References</b> cve: CVE-2017-16894</p>

Medium (CVSS: 4.8) NVT: Cleartext Transmission of Sensitive Information via HTTP
<p><b>Summary</b> The host / application transmits sensitive information (username, passwords) in cleartext via HTTP.</p>
<p><b>Quality of Detection (QoD):</b> 80%</p>
<p><b>Vulnerability Detection Result</b> The following input fields were identified (URL:input name): <code>http://192.168.0.17/drupal/:pass</code> <code>http://192.168.0.17/drupal/?D=A:pass</code> <code>http://192.168.0.17/payroll_app.php:password</code> <code>http://192.168.0.17/phpmyadmin/:pma_password</code></p>

... continued from previous page ...
<pre>http://192.168.0.17/phpmyadmin/?D=A:pma_password http://192.168.0.17/phpmyadmin/changelog.php:pma_password http://192.168.0.17/phpmyadmin/index.php:pma_password http://192.168.0.17/phpmyadmin/license.php:pma_password http://192.168.0.17/phpmyadmin/url.php:pma_password</pre>
<p><b>Impact</b>  An attacker could use this situation to compromise or eavesdrop on the HTTP communication between the client and the server using a man-in-the-middle attack to get access to sensitive data like usernames or passwords.</p>
<p><b>Solution:</b>  <b>Solution type:</b> Workaround  Enforce the transmission of sensitive data via an encrypted SSL/TLS connection. Additionally make sure the host / application is redirecting all users to the secured SSL/TLS connection before allowing to input sensitive data into the mentioned functions.</p>
<p><b>Affected Software/OS</b>  Hosts / applications which doesn't enforce the transmission of sensitive data via an encrypted SSL/TLS connection.</p>
<p><b>Vulnerability Detection Method</b>  Evaluate previous collected information and check if the host / application is not enforcing the transmission of sensitive data via an encrypted SSL/TLS connection.  The script is currently checking the following:  - HTTP Basic Authentication (Basic Auth)  - HTTP Forms (e.g. Login) with input field of type 'password'  Details: Cleartext Transmission of Sensitive Information via HTTP  OID:1.3.6.1.4.1.25623.1.0.108440  Version used: 2023-09-07T05:05:21Z</p>

Medium (CVSS: 4.3) NVT: jQuery < 1.6.3 XSS Vulnerability
-------------------------------------------------------------

Summary jQuery is prone to a cross-site scripting (XSS) vulnerability.
---------------------------------------------------------------------------

Quality of Detection (QoD): 80%
---------------------------------

... continues on next page ...
--------------------------------

... continued from previous page ...

### Vulnerability Detection Result

Installed version: 1.6.2  
 Fixed version: 1.6.3  
 Installation  
 path / port: /phpmyadmin/setup/../js/jquery/jquery-1.6.2.js  
 Detection info (see OID: 1.3.6.1.4.1.25623.1.0.150658 for more info):  
 - Identified file: http://192.168.0.17/phpmyadmin/setup/../js/jquery/jquery-1.6.  
 ↵2.js  
 - Referenced at: http://192.168.0.17/phpmyadmin/setup/

### Solution:

**Solution type:** VendorFix  
 Update to version 1.6.3 or later.

### Affected Software/OS

jQuery prior to version 1.6.3.

### Vulnerability Insight

Cross-site scripting (XSS) vulnerability in jQuery before 1.6.3, when using location.hash to select elements, allows remote attackers to inject arbitrary web script or HTML via a crafted tag.

### Vulnerability Detection Method

Checks if a vulnerable version is present on the target host.

Details: **jQuery < 1.6.3 XSS Vulnerability**

OID: 1.3.6.1.4.1.25623.1.0.141637

Version used: 2023-07-14T05:06:08Z

<b>Affected Software/OS</b> jQuery prior to version 1.6.3.	
<b>Vulnerability Insight</b> Cross-site scripting (XSS) vulnerability in jQuery before 1.6.3, when using location.hash to select elements, allows remote attackers to inject arbitrary web script or HTML via a crafted tag.	
<b>Vulnerability Detection Method</b> Checks if a vulnerable version is present on the target host. Details: jQuery < 1.6.3 XSS Vulnerability OID:1.3.6.1.4.1.25623.1.0.141637 Version used: 2023-07-14T05:06:08Z

### 2.1.11 Low general/tcp

Low (CVSS: 2.6) NVT: TCP Timestamps Information Disclosure
<b>Summary</b> The remote host implements TCP timestamps and therefore allows to compute the uptime.
<b>Quality of Detection (QoD):</b> 80%
<b>Vulnerability Detection Result</b> It was detected that the host implements RFC1323/RFC7323.

... continues on next page ...

	... continued from previous page ...
	The following timestamps were retrieved with a delay of 1 seconds in-between: Packet 1: 358880 Packet 2: 359146
<b>Impact</b>	A side effect of this feature is that the uptime of the remote host can sometimes be computed.
<b>Solution:</b> <b>Solution type:</b> Mitigation	To disable TCP timestamps on linux add the line 'net.ipv4.tcp_timestamps = 0' to /etc/sysctl.conf. Execute 'sysctl -p' to apply the settings at runtime. To disable TCP timestamps on Windows execute 'netsh int tcp set global timestamps=disabled'. Starting with Windows Server 2008 and Vista, the timestamp can not be completely disabled. The default behavior of the TCP/IP stack on this Systems is to not use the Timestamp options when initiating TCP connections, but use them if the TCP peer that is initiating communication includes them in their synchronize (SYN) segment. See the references for more information.
<b>Affected Software/OS</b>	TCP implementations that implement RFC1323/RFC7323.
<b>Vulnerability Insight</b>	The remote host implements TCP timestamps, as defined by RFC1323/RFC7323.
<b>Vulnerability Detection Method</b>	Special IP packets are forged and sent with a little delay in between to the target IP. The responses are searched for a timestamps. If found, the timestamps are reported. Details: TCP Timestamps Information Disclosure OID:1.3.6.1.4.1.25623.1.0.80091 Version used: 2023-12-15T16:10:08Z

### 2.1.12 Low general/icmp

Low (CVSS: 2.1) NVT: ICMP Timestamp Reply Information Disclosure
<b>Summary</b> The remote host responded to an ICMP timestamp request.
<b>Quality of Detection (QoD):</b> 80%
<b>Vulnerability Detection Result</b> The following response / ICMP packet has been received: - ICMP Type: 14 - ICMP Code: 0
<b>Impact</b> This information could theoretically be used to exploit weak time-based random number generators in other services.
<b>Solution:</b> <b>Solution type:</b> Mitigation Various mitigations are possible: - Disable the support for ICMP timestamp on the remote host completely - Protect the remote host by a firewall, and block ICMP packets passing through the firewall in either direction (either completely or only for untrusted networks)
<b>Vulnerability Insight</b> The Timestamp Reply is an ICMP message which replies to a Timestamp message. It consists of the originating timestamp sent by the sender of the Timestamp as well as a receive timestamp and a transmit timestamp.
<b>Vulnerability Detection Method</b> Sends an ICMP Timestamp (Type 13) request and checks if a Timestamp Reply (Type 14) is received. Details: ICMP Timestamp Reply Information Disclosure OID:1.3.6.1.4.1.25623.1.0.103190 Version used: 2025-01-21T05:37:33Z

### 2.1.13 Low 22/tcp

<p>Low (CVSS: 2.6) NVT: Weak MAC Algorithm(s) Supported (SSH)</p>
<p><b>Product detection result</b>  cpe:/a:ietf:secure_shell_protocol  Detected by SSH Protocol Algorithms Supported (OID: 1.3.6.1.4.1.25623.1.0.105565  →)</p>
<p><b>Summary</b>  The remote SSH server is configured to allow / support weak MAC algorithm(s).</p>
<p><b>Quality of Detection (QoD):</b> 80%</p>
<p><b>Vulnerability Detection Result</b>  The remote SSH server supports the following weak client-to-server MAC algorithm  →(s) :  hmac-md5  hmac-md5-96  hmac-md5-96-etc@openssh.com  hmac-md5-etc@openssh.com  hmac-sha1-96  hmac-sha1-96-etc@openssh.com  umac-64-etc@openssh.com  umac-64@openssh.com  The remote SSH server supports the following weak server-to-client MAC algorithm  →(s) :  hmac-md5  hmac-md5-96  hmac-md5-96-etc@openssh.com  hmac-md5-etc@openssh.com  hmac-sha1-96  hmac-sha1-96-etc@openssh.com  umac-64-etc@openssh.com  umac-64@openssh.com</p>
<p><b>Solution:</b>  <b>Solution type:</b> Mitigation  Disable the reported weak MAC algorithm(s).</p>
<p><b>Vulnerability Detection Method</b>  Checks the supported MAC algorithms (client-to-server and server-to-client) of the remote SSH server.  Currently weak MAC algorithms are defined as the following:  <ul style="list-style-type: none"> <li>- MD5 based algorithms</li> <li>- 96-bit based algorithms</li> <li>- 64-bit based algorithms</li> </ul> ... continues on next page ... </p>

... continued from previous page ...

- 'none' algorithm  
Details: Weak MAC Algorithm(s) Supported (SSH)  
OID:1.3.6.1.4.1.25623.1.0.105610  
Version used: 2024-06-14T05:05:48Z

**Product Detection Result**

Product: cpe:/a:ietf:secure\_shell\_protocol  
Method: SSH Protocol Algorithms Supported  
OID: 1.3.6.1.4.1.25623.1.0.105565)
